

LEARNORA

FIELD GUIDE / 2026

AI TOOLS FOR DAILY WORK

A practical system for planning, writing, researching, analysing and creating with AI - while keeping your judgment in charge.

WORKFLOWS / PROMPTS / CHECKLISTS / 30-DAY PLAN

LEARN TODAY. EARN TOMORROW.

What this guide helps you do

Use AI as a capable assistant for routine work. Every output still needs your context, review and final decision.

THE PROMISE

You will finish with a repeatable workflow, a small tool stack, copy-ready prompts, quality checks and a 30-day practice plan. No paid subscription is required to follow the exercises.

01 Choose one real task

Pick a task you already do: a client reply, lecture notes, a content calendar, a small spreadsheet or a proposal. Use your own material when you have permission to share it.

02 Run the full loop

Brief the tool, inspect the draft, ask for a revision, verify important claims and edit the final version yourself.

03 Save what works

Keep the final prompt, your edits and a short note about what failed. That becomes your personal playbook.

USE THE EXAMPLES CORRECTLY

Named businesses, briefs, budgets and outputs in this guide are Illustrative Examples. They are practice material, not real client results.

FIELD EXERCISE

START WITH ONE TASK

Write: "I need to turn [input] into [output] for [audience]."

Keep: A task brief you can test today.

Your route through the book

PART	FOCUS	PAGES
01 / Foundations	Task choice, prompt design and revision	04-06
02 / Tool desk	A lean tool map and evidence checks	07-08
03 / Workflows	Notes, writing, content, data, visuals, learning and clients	09-15
04 / Guardrails	Privacy, reuse, quality checks and templates	16-19
05 / Practice	30-day plan, worksheet and next steps	20-23

FAST ROUTE

Only have an hour? Read pages 4-8, try one workflow on pages 9-15, copy a prompt from pages 17-18 and use the review checklist on page 19.

A For students

Start with the learning workflow on page 14 and the daily plan on pages 20-21.

B For freelancers and creators

Start with the client and content workflows on pages 11 and 15. Keep the permissions check on page 16 close by.

C For young professionals

Start with notes, emails and spreadsheets on pages 9, 10 and 12. Review every externally shared output.

FIELD EXERCISE

PICK A PATH

Circle the one chapter that matches a task due this week. Read it before browsing new tools.

Keep: One chosen workflow and its next action.

Where AI actually helps

The useful unit is a task, not an app. Start with the work you need to finish.

TASK TYPE	GOOD AI ROLE	HUMAN CHECK
Transform	Turn notes into a brief or a long draft into a short version.	Meaning preserved?
Generate	Offer options for titles, outlines or questions.	Relevant and original?
Analyse	Find patterns in a supplied table or feedback set.	Math and interpretation?
Research	Surface leads and sources for investigation.	Primary source and date?
Decide	Compare options using your stated criteria.	You choose and own the decision.

THE FIVE-STEP LOOP

Input → brief → draft → verify → publish. If the source material is weak or unclear, fix it before expecting a strong answer.

TRY A five-minute exercise

Write three repeated tasks from this week. For each, mark the input you already have, the output you need and who could be affected if the answer is wrong.

FIELD EXERCISE

TRIAGE PRACTICE

For a customer reply, identify the source facts, the draft role and the one fact only you can approve.

Keep: Three distinct responsibilities.

The one-page prompt brief

Most weak AI outputs come from an incomplete brief. Supply the details a competent colleague would need.

FIELD	WHAT TO GIVE	EXAMPLE
Task	One clear verb and deliverable	Draft a reply
Context	Audience, situation and source	First-time buyer asked about delivery
Constraints	Length, tone, must include/avoid	Under 80 words; no price promises
Format	The shape of the answer	2 variants + a short subject line
Truth rule	What to do with unknowns	Mark missing facts as [confirm]

COPY-READY MASTER PROMPT

You are helping me with [task]. Audience: [who]. Use only these facts: [facts]. Goal: [outcome]. Tone: [tone]. Constraints: [length, exclusions]. Format: [structure]. If information is missing, list the missing items before drafting. Do not invent facts.

TIP Attach a good reference

A sample written by you, a verified FAQ or an approved brand guide is more useful than saying “make it premium.” State what should be copied: structure, tone or terminology.

FIELD EXERCISE

FILL THE BRIEF

Task: []. Audience: []. Facts: []. Constraints: []. Format: []. Unknowns: [].

Keep: A prompt with no hidden assumptions.

Make the first draft better

A good second turn is specific. Replace “make it better” with a targeted review instruction.

1 Ask for a diagnostic first

“List three places where this draft misses the audience or brief. Do not rewrite yet.”

2 Choose the changes

“Fix items 1 and 3. Keep the approved offer details and the opening sentence.”

3 Request a final audit

“Check for unsupported claims, unclear pronouns and missing calls to action. Flag issues in a table.”

The edit ladder

Draft → critique → targeted revision → fact check → human edit. Save the approved version separately so a later rewrite cannot silently change the agreed facts.

WHEN TO STOP PROMPTING

If you have given two clear revisions and the tool still misunderstands the task, rewrite the brief or complete the last edit yourself. More turns do not automatically add quality.

FIELD EXERCISE

REVISION TEST

Take one weak sentence. Ask for two rewrites and the reason for each change; choose or write the final version.

Keep: A documented human edit.

Build a lean tool stack

Start with one general assistant and your existing work apps. Features and plan limits can change, so check the product’s current help pages before buying.

NEED	POSSIBLE TOOL	PRACTICAL USE
Draft, reason, files	ChatGPT	Outline, transform notes, explore supplied data
Google workflow	Gemini / Workspace	Draft with permitted Workspace context
Microsoft workflow	Copilot / Microsoft 365	Draft within supported Office apps
Design first draft	Canva Magic Write / Design	Explore copy and design directions
Truth check	Official sites + source documents	Confirm dates, claims and rules

SELECTION RULE

Choose the tool already approved for your data and workflow. Test it on one real task. Compare output quality, export options and privacy settings before adding more subscriptions.

NOTE Availability varies

Some features depend on account type, plan, region, administrator controls and device. The matrix describes product roles, not a guarantee that a feature is available to every reader.

FIELD EXERCISE

TOOL DECISION

Score your current app for access, permitted data, output quality and export. Test before subscribing.

Keep: One tool choice with a reason.

Research without fake certainty

An AI answer can sound confident and still be wrong. Treat it as a map of leads, then inspect the source.

1

Separate claims from suggestions

Highlight names, dates, prices, statistics, laws, product features and quotes. These need source checks.

2

Find the primary source

Prefer the company's help centre, regulator, original report or full paper. Check its date and what it actually says.

3

Record the evidence

Keep a small claim log: claim, source URL, source date, checked date and confidence.

4

Write the qualified version

If evidence is incomplete, narrow the claim or remove it. Never invent a source to make the draft look credible.

RESEARCH PROMPT

"Make a two-column table: claims that require verification and suggested primary-source locations. Do not present any claim as verified. Flag facts that may have changed since publication."

FIELD EXERCISE

CLAIM LOG

Record one changing claim, its primary URL, publication date and the date you checked it.

Keep: One traceable factual statement.

Meeting notes to action list

Useful when you have permission to process the notes. Do not upload a confidential recording or transcript without approval.

1

Capture faithfully

Write rough notes with decisions, open questions and who said what. For a recording, follow the meeting's consent and company policy.

2

Structure the notes

Ask for decisions, owners, deadlines and blockers. Require "not specified" when a detail is absent.

3

Confirm with people

Compare the output with the original notes. Send only the confirmed actions and due dates.

Copy-ready prompt

"Convert the notes below into: (1) decisions, (2) action items with owner and deadline, (3) open questions. Do not assign an owner or date unless explicitly stated. Put unknowns in a separate list. Notes: [paste approved notes]."

ILLUSTRATIVE EXAMPLE

"Design draft by Friday" becomes an action only if the owner and Friday's actual calendar date are confirmed. The model must not guess either.

FIELD EXERCISE**ACTION CHECK**

For each proposed action, ask: who owns it, what is due and where did the source say so?

Keep: No invented owners or dates.

Write messages people can use

Apply this to email, WhatsApp, support replies or job applications. Your facts and relationship determine the tone.

STEP	QUESTION	OUTPUT
Intent	What should the reader know or do?	One clear purpose
Facts	What is confirmed? What is missing?	Approved fact list
Tone	How familiar is the relationship?	Natural, respectful wording
Format	How will this be read?	Short paragraphs / mobile ready
Review	Can a reader act without guessing?	One final edit

Client reply template

“Draft a warm, direct WhatsApp reply for [audience]. Confirm these facts only: [facts]. Answer [question]. Ask exactly one useful next-step question. Under [word count] words. Avoid hype and unverified delivery or price promises.”

EDIT Human pass

Read it aloud. Remove filler openings, repeated phrases and anything that sounds too formal for the relationship. Verify phone numbers, links and promises character by character.

FIELD EXERCISE

MESSAGE TEST

Send the draft to yourself. Can the reader understand the request from the first two lines?

Keep: One clear mobile-length reply.

Create content from one strong idea

A campaign needs an audience, a message and evidence. AI can vary the angle, but it cannot supply a real customer insight by guessing.

1

Create an input card

Write: offer, audience, objection, proof you can show, required call to action and prohibited claims.

2

Generate distinct angles

Ask for three angles: problem, process and proof. Reject variants that only change a few words.

3

Choose and produce

Turn one selected angle into a 15-second script, caption and visual brief. Keep the facts aligned.

4

Review before publishing

Check brand name, offer details, claims, local language, image rights and destination link.

Illustrative Example: Surat sewing class

Input: offline classes, four confirmed batch times and an 8-month course. Output request: one Gujarati-first Reel concept for local learners. The AI must not invent a new batch date, fee or placement guarantee.

FIELD EXERCISE**ANGLE TEST**

Write three genuinely different openings for the same approved offer; mark the proof each needs.

Keep: One publishable angle with evidence.

Work with a spreadsheet safely

A model can explain or explore a table, but you must validate the source data, formulas and conclusions.

1

Prepare a clean file

Remove personal identifiers. Label columns, currency, date range and missing values. Keep an untouched original.

2

Ask a narrow question

For example: "Group spend by week; calculate cost per inquiry from supplied totals; flag missing rows."

3

Request reproducible steps

Ask the model to show formulas or code and distinguish source numbers from calculated numbers.

4

Spot-check manually

Verify row count, date range, a few entries, totals and one formula with a calculator or spreadsheet.

ILLUSTRATIVE EXAMPLE

If a campaign sheet has spend and inquiries, $\text{cost per inquiry} = \text{spend} \div \text{inquiries}$ when inquiries are greater than zero. This is a descriptive metric; it does not establish customer quality or profitability.

AVOID The chart trap

A chart can be attractive while the data is wrong. Label the metric, date period, denominator and any missing observations before sharing it.

FIELD EXERCISE

DATA CHECK

Recalculate one total, one ratio and one sample row outside the AI tool.

Keep: A verified table and labelled metric.

Slides and visual briefs

Use AI to organise a story and draft visual directions. The final chart, logo and typography still need design review.

1 Start with one audience question

What should the viewer understand, decide or remember after seeing the material?

2 Create a slide map

Ask for a headline and one key point per slide. Put supporting detail in notes.

3 Choose the right visual

A process needs a flow; comparison needs a table; numerical change needs a chart with real data.

4 Inspect the exported file

Look at every page at presentation size. Check clipping, contrast, spelling, image rights and source labels.

Visual brief prompt

“Turn this approved outline into a six-slide deck plan. For each slide give one headline, a 20-word maximum body, the best visual type and one presenter note. Do not add market data or testimonials.”

DESIGN PRINCIPLE

AI artwork can illustrate a concept; it should not impersonate a real customer, employee, document or measured outcome.

FIELD EXERCISE

VISUAL TEST

Sketch the main point with boxes and arrows before generating a slide.

Keep: A visual that explains one relationship.

Study with AI, not around it

The best study task makes you retrieve, explain and correct ideas rather than copy a summary into notes.

1 Supply the source

Use your syllabus, textbook excerpt or your own notes. Identify the chapter and exam level.

2 Ask for an explanation

Request a simple explanation, a worked example and a list of assumptions.

3 Test recall

Ask five questions without answers first. Answer from memory, then request marking and feedback.

4 Check the text

Compare definitions, formulas and dates with the course material or teacher guidance.

Tutor prompt

“Teach [topic] to a beginner using my notes below. After the explanation, ask me three progressively harder questions, one at a time. Wait for my answer before giving feedback. If my notes do not support a claim, say so.”

PRACTICE TASK

Turn one class topic into a 10-minute teach-back: explain it out loud without looking, identify where you hesitate, then ask AI for a targeted example.

FIELD EXERCISE

RECALL TEST

Close the source and explain the concept in four sentences. Then find the first gap.

Keep: A targeted next question to study.

Freelancer and client workflow

AI can speed up preparation, but proposals and deliverables should reflect your actual service, capacity and permission to use client material.

STAGE	YOUR INPUT	AI ASSISTANCE
Discovery	Client goal and confirmed constraints	Clarifying questions
Scope	Deliverables and exclusions	Statement of work draft
Delivery	Approved brief and source assets	Outline and first draft
Review	Brand guide and acceptance criteria	QA checklist
Handover	Final approved files	Concise handover note

Scope prompt

“Using only the confirmed discovery notes, draft a scope with deliverables, assumptions, client inputs required, revision process and explicit exclusions. Put any unknown dates or fees in [confirm] fields. Do not imply prior results.”

REALITY CHECK

Never claim that AI made a campaign successful or that a client approved a result if you cannot document it. Keep sample work labelled as a sample.

FIELD EXERCISE

SCOPE TEST

Highlight every date, fee, deliverable and exclusion in the proposed scope.

Keep: A draft with unknowns visibly marked.

Privacy before convenience

Think about data before pasting it. Your account settings do not grant you permission to share somebody else's material.

DATA	DEFAULT ACTION
Public and approved	Use with a fact check.
Internal but non-sensitive	Follow the organisation's approved tool and policy.
Client brief or unpublished work	Get permission, use approved workspace, minimise details.
Personal, financial, medical or credentials	Do not paste into a general chat. Seek an approved process.

1

Minimise

Replace names, phone numbers and order IDs with placeholders where possible.

2

Inspect settings

Review history, model-improvement and sharing controls in the product and your organisation.

3

Check access

Make sure collaborators, connectors and generated links have the intended permissions.

4

Keep accountability

Verify the output and document a human approver for consequential work.

REMEMBER

Turning off model training is different from deleting a conversation, changing a retention policy or getting client consent. Check each separately.

FIELD EXERCISE**PERMISSION TEST**

Before pasting: who owns the data, who can see the tool, and can you remove identifiers?

Keep: An approved, minimised input.

Prompt library / everyday work

Replace each bracket with real context. Add a “do not invent facts” instruction whenever the material is incomplete.

01 / Summarise a document

“Summarise the attached approved document for [audience]. Give five key points, three action items and any questions the document does not answer. Quote short passages only where necessary, with page references.”

02 / Rewrite for clarity

“Rewrite this text for [audience] at a beginner reading level. Keep all confirmed facts, numbers and limitations. Mark ambiguous phrases and list substantive changes below the draft.”

03 / Plan a day

“Here are my tasks, deadlines and estimated effort: [list]. Create a realistic schedule with focus blocks and breaks. Identify conflicts; do not assume every task will fit.”

04 / Interview practice

“Act as an interviewer for [role]. Ask one role-relevant question at a time. After my answer, score clarity and evidence using a short rubric. Do not invent experience for me.”

FIELD EXERCISE

PROMPT LIBRARY

Save one prompt and the final version it produced. Note what you edited.

Keep: A reusable prompt plus quality note.

Prompt library / creator & analyst

05 / Content angles

“Using this approved offer [facts] and audience [profile], propose three genuinely different content angles. For each give hook, core point, proof required and CTA. Flag any missing proof.”

06 / Feedback themes

“Group these anonymised comments into themes. Show representative short excerpts and count only the comments provided. Separate interpretation from direct customer wording.”

07 / Data interpretation

“Using the attached table only, define each metric, show the calculation, identify missing data and provide three cautious observations. Do not infer causation from a simple trend.”

08 / Self-review

“Review this draft against the brief below. Return a table with requirement, pass/fail, evidence in the draft and proposed fix. Do not rewrite until I select fixes.”

FIELD EXERCISE

ANALYST NOTE

For a model observation, write the source row or citation beside the claim.

Keep: A claim that can be independently checked.

The publish-ready check

Use this before any email, proposal, campaign, worksheet, slide or report leaves your workspace.

CHECK	QUESTION TO ASK
Facts	Can I trace every number, quote, date and feature claim to a source?
Scope	Did the output answer the actual brief without adding unsupported promises?
Audience	Would the intended reader understand the first read?
Data	Was sharing this input permitted? Is sensitive information removed?
Format	Are names, links, prices, units, dates and exports correct?
Ownership	Who performs the final review and gives approval?

TWO-PASS REVIEW

Pass 1: substance. Check truth, omissions and decisions. Pass 2: presentation. Check readability, spelling, formatting and links. Do the substance pass first.

STOP Red flags

The answer cites a source you cannot open; calculates from undefined columns; asserts current pricing; invents a client quote; or exposes private details. Correct the input or discard the output.

FIELD EXERCISE

FINAL GATE

Read a draft once for truth, once for the reader, once for links and exports.

Keep: A named reviewer and an approved file.

Days 1-15 / build the habit

Allow 15-30 minutes per exercise. A missed day can be resumed; the purpose is a reusable process, not a streak.

DAYS 01-03

Inventory three tasks. Choose one low-risk task. Draft your first prompt brief and save the result.

DAYS 04-06

Run the edit ladder on an email or summary. Compare the first and final drafts; record two changes you made.

DAYS 07-09

Research one changing fact using a primary source. Build a three-row claim log and correct the draft.

DAYS 10-12

Turn approved notes into action items. Confirm owners, dates and unknowns against the source.

DAYS 13-15

Choose one workflow: content, study or spreadsheet. Complete its checklist and produce one finished artifact.

FIELD EXERCISE

MIDPOINT REVIEW

At day 15, write what improved, what still fails and which task to repeat.

Keep: A revised prompt brief for week three.

Days 16-30 / make it repeatable

DAYS 16-18

Test two prompt variants on the same task. Compare accuracy, effort and edit time; keep the better one.

DAYS 19-21

Build a small library: two briefs, two approved prompts and a checklist for your most common task.

DAYS 22-24

Do a privacy review: classify your inputs and replace sensitive examples with anonymised practice data.

DAYS 25-27

Create one end-to-end deliverable for your own use. Apply the two-pass review and ask a trusted reader for feedback.

DAYS 28-30

Revise your process. Write a one-page personal SOP: input rules, tool choice, prompt, verification and final owner.

FIELD EXERCISE

KEEP THE SYSTEM

At day 30, archive the final SOP and three approved examples in one folder.

Keep: A small personal workflow library.

Your AI task card

Duplicate this page for each repeated task. The best prompt is attached to a clear purpose and a review method.

TASK & AUDIENCE

What must be finished, and who will use it?

SOURCE MATERIAL

Where do the approved facts come from?

SUCCESS CRITERIA

What would make the result useful and complete?

RISK / PERMISSION

What cannot be shared or assumed?

TOOL & FORMAT

Which approved tool, and what exact output format?

VERIFY & OWNER

What will be checked, and who signs off?

NEXT STEP

Complete one task card for a job you do every week. Reuse it three times, then refine the brief and review checklist from what actually went wrong.

EDITORIAL NOTE

This is an educational guide, not legal, tax, financial or professional advice. Apply your organisation's policies and verify current product terms before using sensitive material.

FIELD EXERCISE

RECHECK BEFORE YOU SELL

Open product help pages again when updating this edition. Refresh any feature or privacy wording that changed.

Keep: A dated source review log.

Now do one real task.

Choose a task, write a brief, inspect the output and verify the facts. Save the prompt that earns a place in your daily workflow.

YOUR FIRST 20 MINUTES

Task card (p. 22) → master prompt (p. 5) → review checklist (p. 19)
